

WP Media Folder Version 4.4.1 (purchased in the Bundle)

Issue no 1.

Adding YouTube video via the URL does not work. When inserting the Youtube video URL here, it shows “Upload errors ...”

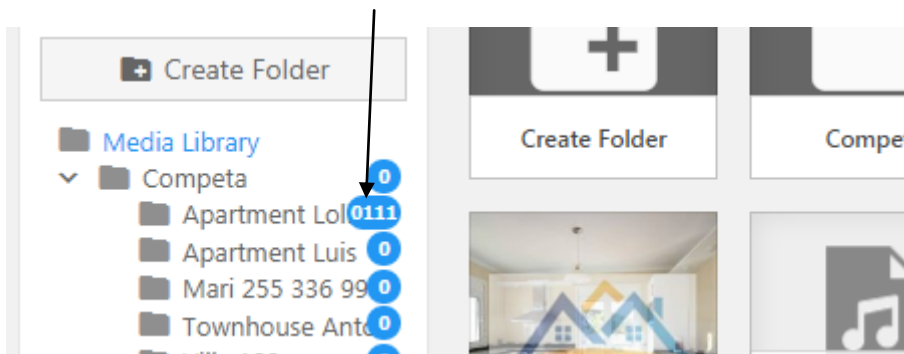

Issue no 2.

When adding images from the media library to any of the new folders / subfolders created, it does not show the number of the images correctly.

Example: I have added 3 images and it shows "0111"

Issue no 3.

After creating a folder or a subfolder and decide to delete it (empty folders), I cannot find a way to do that.

Example: I want to remove the folder "Marbella" or the subfolder "456456". (Grid or List view).
How to do that ?
